### **DETAILED ACTION**

1. This application has been examined. This application is a continuation-in-part (C-I-P) of serial number 10/070,482, filed August 31, 1999, now US Patent 6,701,960, issued March 9, 2004. This action is in response to a preliminary amendment filed October 15, 2004. Claims 1-6 and 8 have been amended. Claims 9 and 10 have been added. The claims appear to be drawn to Figure 9 of the instant application. Applicants are asked to update the status of parent application in the specification of the instant application in response to this Office action. Claims 1-10 are pending.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-10 rejected under 35 U.S.C. 102(b) as being anticipated by Bass et al. Note the separating arrangement(Figure2) including a pumps 12 and 25, and first and second reverse osmosis units 22 and 20. In column 6, lines 5+, Bass et al disclose that separating units as separating units are reverse osmosis units are known. A fluidic loop which includes pumps 12 and 25 elevates the pressure of the "...fluid through the first separation unit to the pump(12, 25) with respect to the admixture components in tanks 1 and 4.

Art Unit: 3753

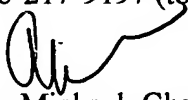

*Conclusion*

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note in particular the disclosures of Shorr, Lin, Bento et al, Al-Samadi et al are of particular interest. Looped pumped admixture including a plurality of separation units are shown in each reference.
